PROFILE

Healthcare interoperability professional with 5+ years of experience implementing and supporting HL7, EDI, and REST API integrations. Experienced with Mirth Connect, Cloverleaf, SQL Server, and Meditech, with a background spanning interface development, production support, reporting, and client-facing implementation. Skilled at translating healthcare workflows and technical requirements into reliable integration solutions.

I take great pride in the work that I do and stand behind my delivered products.

EXPERIENCE

Senior Interface Analyst | Illumia

Feb. 2024-Present

Implement HL7 ADT and order integrations for healthcare clients, aligning with EHR workflows to ensure accurate patient diet, allergy, and location data.

Deliver EDI integrations with clients and vendors to enable real-time inventory, pricing, ordering, and invoicing.

Lead end-to-end REST API integrations, including environment setup, JWT authentication, documentation, testing, and go-live support.

Analyze client needs and interface issues, partnering with product and engineering to deliver integration enhancements.

Enterprise Data Analyst | Upper Allegheny Health System

May 2022-Feb. 2024

Owned HL7 interface operations across the health system, including troubleshooting, after-hours support, new implementations, and ongoing maintenance.

Administered SQL Server, SSRS, and SSIS environments, including upgrades and migrations to new virtual machines.

Developed SQL queries and SSRS reports to support organizational needs, including a NEDOCS calculation report for emergency department operations.

Led modernization initiatives, including migrating Meditech CCDs to the MU3 format to support updated interoperability requirements.

Responsible for SharePoint administration and design.

Enterprise Data Specialist | Upper Allegheny Health System

Oct. 2021-May 2022

Monitored and maintained HL7 interfaces in Cloverleaf.

Wrote SQL queries to create reports in SSRS utilizing data from the Meditech EHR.

Created Meditech NPR reports and macros for reporting on data not available in SQL.

Modernized the department's automated file transfers system utilizing CerberusFTP.
